Stop All Default toggle button does not work.

Published 08/14/2013

Symptom(s):

Stop All Default toggle button does not work.
Because the Stop all Default toggle button does not work, not all forked processes stop when a breakpoint for a single process is reached while the toggle button is switched on.

Fact(s):

IRIX 6.5.30
ProDev WorkShop 2.9.5
cvd debugger

SGI Solution:

Workaround: manually add "all pgrp" in the Trap Manager.

Cause(s):

The Group Trap Default toggle and Stop All Defaults toggle buttons are broken.
